BLUEPRINT3D LTD - MAGENTO 2 MODULE

Shared Product Options

Install and usage guide. Build a custom option set once, group it, and assign it to any number of products - update the group and every assigned product updates with it.

PACKAGE	MODULE	REQUIRES	LICENSE
blueprint3d/module-shared-product-options	BluePrint3D_SharedProductOptions	Magento 2.4.x | PHP 8.1-8.3	Free Core Edition

1 What it does

Magento forces you to recreate the same custom options - Gift Wrapping, Custom Engraving, Extended Warranty - on every product individually. Change a price and you are editing every product it appears on, one at a time.

This module introduces **Shared Option Groups**: build a set of dropdowns, text fields, price modifiers, and image switchers once in a dedicated admin screen, then assign the whole group to any product from a searchable multi-select on the product edit form. Update the group and every assigned product reflects the change immediately, on the storefront, in the cart, and at checkout.

FREE TIER This Core edition is limited to 6 shared option groups. See Shared Product Options Pro for unlimited groups, bulk product assignment, and customer-group targeted visibility.

2 Installation

1 **Install via Composer**

```
$ composer require blueprint3d/module-shared-product-options
```

2 **Enable the module**

```
$ php bin/magento module:enable BluePrint3D_SharedProductOptions
```

3 **Run setup upgrade**

```
$ php bin/magento setup:upgrade
```

4 **Compile and flush cache**

```
$ php bin/magento setup:di:compile
$ php bin/magento cache:flush
```

3 Creating a group

Shared Option Groups live in their own screen, not in Stores > Configuration:

`Catalog > Shared Product Options`

1. **Click Add New Group**
   Give the group a name, for example "Standard Add-ons".
2. **Add your options**
   Dropdowns, text fields, price modifiers, and image switchers, exactly as you would on a single product.
3. **Save the group**
   Free tier groups: up to 6 in total.

4 Assigning it to products

1. **Open a product**
   Go to Catalog > Products and edit any product.
2. **Expand BluePrint3D Shared Options**
   A new fieldset on the product edit form.
3. **Check the groups you want**
   A searchable multi-select lists every group you have created.
4. **Save the product**
   The options render on the storefront and flow through to cart and checkout automatically.
